

PICS

Paperless Inventory Control System

Know what Inventory you have, and what you've sold!

PICS is a simple and effective system to use for controlling your inventory. **PICS** maintains your client database, as well as their purchasing history. Your sales are tracked making department or user chargebacks quick, easy and accurate.

PICS prints off a re-order report for all items where the "on-hand" quantity is below your set minimum. Supplier details and their part numbers are printed to facilitate ordering. Reports – detailed and summary, can be printed providing an audit trail.

Features

Customer File

Customers (or users) are identified, and can be provided with BAR CODED ID cards. An alternate option for tracking your customers (or users) is to assign them an alphanumeric code.

Stock File

Each stock item has a unique alphanumeric code. Your suppliers' names and their part numbers are entered, in addition to your minimum and maximum stock quantities.

Issues, Sales and Credit Transactions

Enter or scan your customer's bar code, followed by the items being sold. At the end of the transaction, a printed receipt is available, when issuing from the PC or after transferring from the handheld computer.

Receiving New Stock

In-coming stock can be received on either the portable handheld computer or by your PC. The BAR CODE number of the item is scanned in, followed by the quantity received.

Reports

There are seven reports available to choose from: Audit, Customer Transactions, Reorder, Discrepancy, Old Transactions, Issued Items or Receiving. You have various sort options, with a "Print Preview" available on the PC.

SAGEDATA

Benefits of PICS

- Maintain control of your inventory – no more "out-of-stock" situations
- Reorder process is simplified making it quick and easy
- Physical inventories (cycle counts) and reconciliation times are greatly reduced
- It's quick, easy and accurate to keep track of what you have on-hand and who you've issued/sold to
