

SEPTRE

Security Patrol Tracking Solution

Know where and when your patrols work accurately!

It is important to complete an accurate and efficient patrol in order to ensure the area is safe and clear. **SEPTRE** is an effective tool that provides benefits to everyone involved in the field of security. This tamper-proof system confirms that patrols are done as scheduled and is 100% accurate. **SEPTRE** utilizes BAR CODE labels to identify locations quickly, easily and accurately. The labels are also unique because there are no human readable numbers, which ensures that labels cannot be duplicated.

Features

Patrols

The Workabout dates and time stamps all scans. During the course of a patrol, the guard simply scans a location's **BAR CODE**, then continues to the next checkpoint. The guard is able to enter any comments relating to a particular location (eg. door ajar, light bulb required). Bar codes **MUST** be scanned and cannot be manually entered by hand. This ensures that the system is 100% accurate and tamper-proof.

New Locations

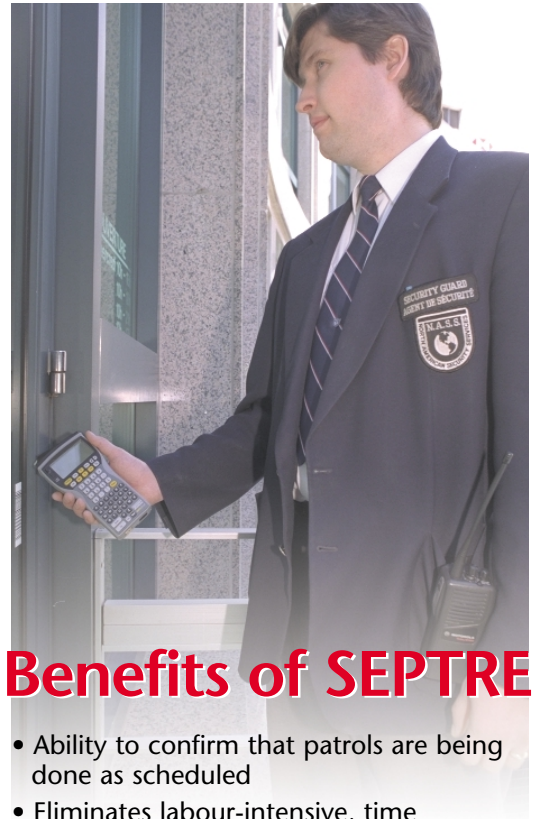

Descriptive information on a location is recorded. This could include building name, room number and department name.

Reports

SEPTRE provides a printed report that chronicles a guard's tour of duty. If you have multiple patrollers, the report can be sorted by a guard's name. Any comments recorded by the guard are also printed for actioning. There are two versions of **SEPTRE** available:

1. **Handheld software**-stand alone reports print directly from the Workabout with no PC needed.
2. **PC software**- with the PC connection, you can download all data that has been collected from the Workabout to the PC. From the PC, you are able to print various reports: by location, guard, month etc.

SAGEDATA

Benefits of SEPTRE

- Ability to confirm that patrols are being done as scheduled
- Eliminates labour-intensive, time consuming paper reporting
- Patrols are completed in a fraction of the time previously required
- SEPTRE provides security patrol companies with a competitive edge

Personalized labels are optional, and available by contacting SageData.
